Process Simplification and Consulting :

Our Open Source web development team built a Recipe management system that calculates your current BMI based on your height, weight, sex, and come up with the best meal you should have to gain weight or lose. Its an innovative solution that solves a real world problem.

W2S Solutions monetizes Intellectual property taking it from the page to the browser. We have created a flexible online tool that leverages three years of research for a leading business book to measure leaders against a global population, giving insight into management style and engagement capacity. We created reports dynamically based on the survey answers once the core puzzle of complex scoring was solved.
